

7 STEPS TO MAKING A MANDALORIAN COSTUME

To make your own Mandalorian costume, you must construct each individual piece of armor. There are six unique pieces of Mandalorian armor; the helmet, the chest armor, the shoulder armor, the gauntlets (forearm armor), the thigh armor, and the shin armor. There are also a few accessories you can add to take your Mandalorian costume to the next level.

The Helmet

There are seven steps required to craft the helmet worn by all Mandalorian warriors. The first of these steps is to gather all the necessary materials. Then, download a Boba Fett or Jango Fett helmet template off of websites such as The Dented Helmet.

Boba Fett and Jango Fett are both popular Star Wars characters that wear Mandalorian armor so that the template will be exactly the same as Din Djarin's helmet. Once you have done so, begin by forming the base of the helmet.

The Chest Armor

Now, you can move on to the body armor. Start by gathering the necessary materials and taking measurements of your chest using a measuring tape.

The Shoulder Armor

The shoulder armor is next. Start by measuring halfway around your bicep and then measure from the top of your shoulder to the middle of your bicep.

The Gauntlets

The gauntlets will go on your forearms. First, measure the length between your wrist and about 2-3 inches away from your elbow (this can vary depending on what feels most comfortable). Then, wrap your measuring tape around the widest section of your forearm and cut out a piece of Black EVA 5mm foam that matches these two measurements.

The Thigh Armor

Now, you can move on to the thigh armor. The thigh armor is the only armor pairing that features different measurements and designs for each thigh.

The Shin Armor

Next up is the shin armor, which comes in two separate pieces for each shin. For the top half of the shin piece, measure from the top of your knee to the midpoint of your shin.

Accessories

Last but certainly not least, you can add any additional accessories to make your Mandalorian costume even more authentic looking than it already is.
